EXPERIENCE

Software Engineering Intern - PTC Software

July 2025 - Present

- Designed and developed REST APIs for ThingWorx UXSubsystem, implementing validation, DFS-based circular dependency detection, and composite-key indexing - reducing API response time from 300 ms to 20 ms (93% improvement); tested via Postman and documented end-to-end.
- Developed an internal Jenkins monitoring dashboard (Python, Streamlit) integrating Jenkins APIs for pipeline health, build tracking, and certificate monitoring - reducing dashboard load time from 10–12s to under 1s through section-level refresh and caching.
- Migrated a large-scale Angular application from version v14 to v21, upgraded 30+ components for the Policy Server product, improving performance, maintainability, and compatibility with modern frameworks.
- Diagnosed and resolved flaky test failures in the codebase by implementing robust unit tests using Mockito and PowerMockito, improving test reliability and stability.
- Enhanced security in InstallAnywhere-based application configuration by implementing SSL keystore password encryption, replacing plain-text storage with encrypted values and enabling secure runtime decryption for both Windows and Linux environments.
- Worked with Azure-based development workflows and internal CI/CD tooling during feature development and testing.

PROJECTS

Jenkins Monitoring Dashboard — Python, Streamlit, Jenkins API, Docker

- Built a Streamlit -based Jenkins monitoring dashboard integrating Jenkins APIs for pipeline health, build tracking, stage execution, infrastructure, and certificate monitoring.
- Designed a shared caching architecture using `st.cache_data` with layered TTLs and section-level refresh controls to reduce redundant API calls and support multi-user usage.
- Implemented environment-aware DEV/STAGE/PROD views, build-status visualization, search/filter workflows, and favorites-based job triage for improved operational visibility.
- Containerized the dashboard using Docker and prepared deployment configurations for CI/CD platform environments.

DocVoice AI Agent – RAG-based Document QA System

- Built an AI-powered document assistant using React, Node.js, Express.js, and FastAPI.
- Implemented RAG-based semantic search using embeddings and FAISS vector database.
- Developed voice-enabled document querying with speech-to-text and emotion detection.
- Integrated Google Meet scheduling, email automation, and citation-backed responses.

Travel Agent App

- Built a full-stack Travel Advisor web app using React.js, Node.js, Google Maps API, and external travel APIs.
- Implemented authentication, reviews, real-time location filtering, and a Gemini API chatbot for enhanced user interaction.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL

Frontend: React.js, HTML, CSS

Backend: Node.js, Express.js

Databases: MongoDB, MySQL

Tools & Technologies: Docker, Gitlab, Git, Jira, Jenkins, REST APIs, SaltStack, Postman, Bitbucket, VS Code, IntelliJ, Eclipse

CS Fundamentals: Data Structures & Algorithms, OOP, DBMS, OS

Testing: Unit Testing, API Testing, Debugging

EDUCATION

Bachelor of Engineering in Information Technology

2022 – 2026

Sinhgad College of Engineering, Pune

CGPA: 9.03

Class X (CISCE)

2019 – 2020

MTMHSS School, Kanpur

96.2%

Class XII (CISCE)

2021 – 2022

MTMHSS School, Kanpur

94.8%

ACHIEVEMENTS AND CERTIFICATIONS

- **Full Stack Development Bootcamp** - Udemy
- Selected as a **Microsoft Learn Student Ambassador** and achieved BETA milestone
- Part of **Google Developer Student Club Junior Team** of my College.
- Successfully completed **HACKTOBERFEST 2023** and recognized in HALL OF FAME
